

Improve patient experience and throughput with better transportation

Roundtrip is an easy-to-use ride booking platform for transportation requesters in the healthcare setting. We make it simple and fast for clinical staff to organize transportation on behalf of patients who need a ride to or from their point of care.

Roundtrip is a comprehensive coordination solution and market aggregator, not just another transportation company. Patients are the priority, and Roundtrip works to ensure that transportation is not only eliminated as a barrier to care, but an easy and pleasant experience for every patient.

How it works:

Trip requester (care manager, social worker, nurse navigator) logs into Roundtrip and orders transportation

Roundtrip acts as a hub and connects the ride request with our transportation provider network

Trip is claimed and completed. Quality feedback is recorded & real-time data is available

Use Roundtrip to:

- **Centralize all patient transportation.** Efficiently coordinate all levels of transport: rideshare, medical sedans, wheelchair vans, and non-emergency ambulances (BLS, ALS, SCT, Bariatric). Involve your existing contracted transportation providers and get greater access with our transportation marketplace.
- **Expand access to care.** Easily schedule single or recurring rides online. Reduce patient no-shows to as low as 3% through 24/7 real-time ride monitoring along with automated multilingual text and voice-based patient notifications.
- **Increase patient throughput.** Move your patients more efficiently while increasing patient satisfaction and overall quality of service. Reduce length of stay and post-discharge wait times by moving patients to their next care destination as soon as they're ready.
- **Empower your team to operate at the top of their licenses.** Care coordinators spend hours on the phone coordinating transportation for their patients. Save up to 90% of time currently spent on finding an available transportation company, confirming times, and securing prior authorizations with Roundtrip's 90-second ride-booking workflow.
- **Use data and uncover new insights.** Ensure all data is stored in a HIPAA compliant format, with the potential to be integrated with other care coordination platforms and EHR systems to improve clinical and operational decision making.
